

**ABSTRACT**

Device to deposit stuffing into food which is deemed stuffable. Device comprised of at least, but not limited to a substantially flat rollable and unrollable sheet that can be formed into a cylinder, a push rod of desired length and diameter. To use the device, create a cavity within the item to be stuffed, lay flat the sheet and place a desired quantity of stuffing on the upward facing surface, roll the sheet to encase the stuffing. With what is now a cylinder of stuffing, introduce the cylinder into the cavity created to a desired depth. While gently grasping the cylinder with one hand, utilize the remaining hand to place the push rod at the exposed end of the cylinder and urge forward the push rod against the stuffing thus depositing the stuffing as desired.
